DLS 655
Dual Laser Source
1310nm and 1550nm Wavelengths

The DLS 655 optical laser source provides multiple wavelength options to meet modern fiber optic testing needs. The base model outputs 1310 and 1550nm wavelengths in either single or dual mode.

When combined with the RP 560 model optical power meter, this laser source can greatly reduce the time needed to test fiber cables with its automated wavelength switching feature. The unit periodically switches between available wavelengths, and the power meter recognizes each time the switch occurs, allowing multiple loss tests to be completed simultaneously.
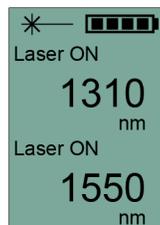

Easy removal of the included SC adapter allows the light source ferrule to be cleaned, preventing contamination of test jumpers. Additional adapters are available.

This device maintains full compliance with all FDA and CFR standards for light-emitting products.

Features

- Small form-factor for fast, simple testing in the field
- Single output port ensures faster switching when testing at multiple wavelengths
- NIST-traceable laser output
- 2kHz, 1kHz, and 270Hz tone modulation
- Long-lasting AA batteries

Combine DLS 655 with the RP 560 optical power meter to perform fiber testing with automated switching.

Simultaneous dual-wavelength transmission cuts testing time in half.

Quick-change adapters allow users to adjust the DLS 655 output to match their testing situation. See next page for full list of adapters.

Hard-sided, padded carrying case included.
