

Itility700/® **US10** Insulation Chamfer Tool

Instruction Sheet A RIPLEY® BRAND

WARNING: THIS TOOL SHOULD NOT BE USED ON LIVE ELECTRICAL CIRCUITS. IT IS NOT PROTECTED AGAINST ELECTRICAL SHOCK! ALWAYS USE OSHA/ANSI/CE OR OTHER INDUSTRY APPROVED EYE PROTECTION WHEN USING TOOLS. THIS TOOL IS NOT TO BE USED FOR PURPOSES OTHER THAN INTENDED. READ CAREFULLY AND UNDERSTAND INSTRUCTIONS BEFORE USING THIS TOOL.

The Utility Tool US10 tool provides a chamfer to the insulation on 5-35kv primary power cables as part of the cable preparation for elbow installation, cable splices, and terminations. The tool produces a precise 30 degree chamfer on XLPE insulated cables. It also chamfers most EPR insulated cables.

The US10 works on cables with insulation diameter range 0.50" - 2.36" (12.7 - 60.0 mm) The tool is designed with a speed button for fast jaw adjustment. The US10 tool then locks securely onto the cable creating a stable tool platform.

The tool is made with low friction thermoplastics and Teflon coated metals for smooth adjustments and operation.

Features

- Insulation diameter range: 0.50" 2.36" (12.7 60.0 mm)
- 30 degree chamfer angle
- Adjustable chamfer depth: 0.0 .150" (0.0 3.8 mm)
- Chamfer is factory set at 0.075" depth for 1/8" (3mm) chamfer length
- Integrated tool stop
- Machined, ground and heat treated tool steel blade
- Compact form for tight work spaces. 200 mm dia max.
- Tool part number: US10-7000
- Replacement blade part number: US10-7500
- Glovable™ EASY USE WITH GLOVES

Operating Instructions

1.0 Prepare the cable

1.1 Make the proper strip backs on the power cable jacket, semi-con, and insulation as specified.

2.0 Secure the tool onto the cable

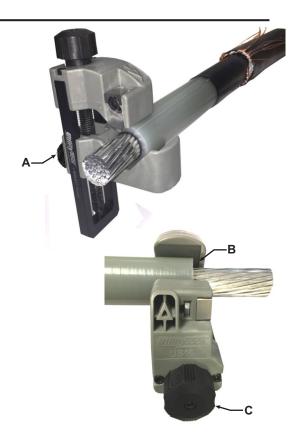

- 2.1: The tool has a guick-clamp speed button (A) to get the jaw readily positioned. Press the button and slide the jaw open and then closed onto the cable.
- 2.2: Position the cable with the blade extended over the conductor. Position the end of the insulation 3/16" -1/4" from the step in the jaw (B).
- 2.3: Rotate the thumb knob (C) to snug the jaw down onto the cable.
- 2.4: make a counterclockwise rotation(backwards) with the tool to ensure the fit is secure.

3.0 Chamfer the cable

- 3.1: Rotate the tool clockwise with light forward pressure.
- 3.2: Rotate the tool until the cable reaches the step in the moveable iaw that acts as a cable stop. The insulation will be chamfered.

4.0 Chamfer length adjustment

- 4.1: Observe the chamfer length.
- 4.2: The blade can be adjusted up or down for the tool to make longer or shorter chamfers. The blade can be adjusted up to form a slight edge break on the cable or down for an approximate 5/32" (4.0mm) chamfer.

WARRANTY: RIPLEY warrants its products against defective materials and workmanship for a period of one year from date of shipment from the RIPLEY factory provided the product is utilized in accordance with instructions and specified ratings.
